Motive International Contracting Company, Riyadh

Umar Bin Sayeed

Lead Planning & Project Control Engineer

I plan, monitor and report on Motive's projects. You see your programme clearly. Delays are raised early and dealt with on the record.

> Motive is an integrated engineering and contracting firm in Riyadh. Engineering, civil, MEP, fit-out, joinery and maintenance, under one roof since 2008.

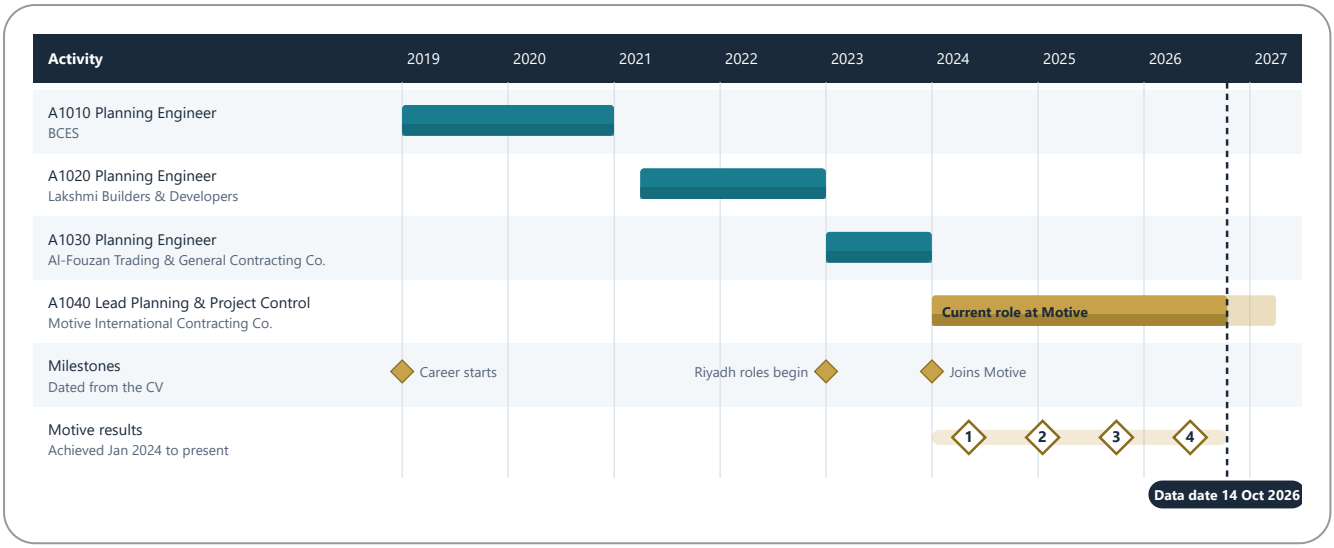

8 years in construction	**Nearly 4 years** leading project controls in Riyadh
185+ days EOT secured across 5 claims	**100%** on-time record on tender programmes

Source: my CV. Fit-out, MEP and IT/ELV projects in Kingdom Tower, KAFD, STC Square, Digital City and MISK City.

My career, shown the way I show yours

One bar per role. Milestones for key results. A data date at today.

Completed role Current role: Motive Milestone (CV date)

Result at Motive (Jan 2024 to present)

1. 185+ days of EOT secured across 5 claims.

2. Delay exposure reduced by an estimated 15%.

3. 100% on-time record on tender programmes.

4. Executive dashboards and KPI reporting introduced.

Lead Planning & Project Control Engineer, Motive International Contracting Co., Riyadh. Jan 2024 to present. Leads planning and controls on up to 4 concurrent projects.

Planning Engineer, Al-Fouzan Trading & General Contracting Co., Riyadh. Jan 2023 to Dec 2023.

Planning Engineer, Lakshmi Builders & Developers, Bangalore. Apr 2021 to Dec 2022.

Planning Engineer, BCES, Hyderabad. Jan 2019 to Dec 2020.

How I protect your programme

Four steps, one answer to each worry. Clients tell us the same things. Handover dates slip. Trades are not coordinated. Progress is hard to see. Approvals hold the work. My method answers each one.

1

Plan

Worry: delays

A baseline built from scope, WBS, productivity, procurement and your contract milestones.

- Primavera P6 baseline
- Cost- and resource-loaded
- Procurement and approvals in the logic

2

Monitor

Worry: approvals and cost overruns

Critical path checks against the baseline every update. Late approvals and procurement are tracked.

- CPM variance analysis
- Submittal and shop-drawing trackers
- Earned value: SPI and CPI

3

Report

Worry: visibility

Short, regular reports for the client, the consultant and our management. The same facts for everyone.

- Weekly and monthly reports
- Look-ahead programme
- KPI dashboard

4

Recover

Worry: missed handover

When a date is at risk, I raise it early, show the options and protect the contract position.

- Early-warning and delay notices
- Recovery and acceleration plans
- EOT support with records

Six deliverables you can use

Weekly

Progress report

Planned against actual, the critical path, top delayed activities, risks and recovery actions.

Weekly

Look-ahead

The next two to three weeks: activities, predecessors, approvals and resources that need action.

At start

Cost- and resource-loaded baseline

An approved Primavera P6 programme for manpower planning and cash-flow forecasting.

Always on

Live dashboard

KPI and S-curve views for clients, consultants and senior management.

As needed

Delay notices

Delay and early-warning notices issued on time, so entitlement is preserved.

As needed

EOT support

Delay events, critical-path impact, contemporaneous records and a clear narrative.

What a weekly view looks like

A simple example of the KPI strip, S-curve and milestones in my reports.

Sample data. Illustrative only. Not a real project.

Planned	Actual	Variance
58%	50%	-8 pts

SPI	Forecast finish
0.86	Wk 22

S-curve: planned (teal), actual (red), forecast (dashed)

Hover, tap or use the arrow keys on the chart to read each week. Sample data.

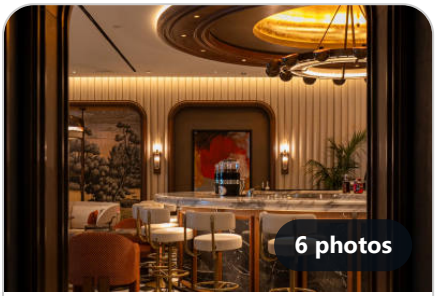

Key milestones: baseline week vs forecast week

Milestone	Base	Fcst	Status
Design approved	W4	W4	On track
Mock-up approved	W8	W9	Watch
MEP first fix	W13	W15	Late
Testing & commissioning	W17	W19	Late
Handover	W20	W22	Late

All figures above are made up to show the layout. Real dashboards use your project's approved baseline and update data.

Growing with Motive

Motive delivers engineering, civil, MEP, fit-out, joinery and maintenance under one roof. Planning and controls hold that together.

Since joining

I joined Motive in January 2024 as Lead Planning & Project Control Engineer. I lead planning and controls across up to 4 concurrent projects.

One person, one programme, no surprises. At Motive I own the baseline, the weekly SPI and CPI numbers, the early warnings and the EOT paperwork. You hear about a problem from me before it reaches your handover date.

Delivery and controls

- Approved Primavera P6 baselines with contractual milestones
- A project control system: procurement, submittal and shop-drawing trackers, cost comparison and dashboards
- Weekly and monthly SPI and CPI reporting for clients and management
- Risk reviews and early warnings to consultants and management

Tenders

I prepare tender programmes and technical proposal content with the estimation and commercial teams. My tender programmes have an on-time record of 100%.

Fast execution starts with a programme that is realistic on day one.

2008 Motive established, Riyadh HQ	**120+** completed projects in the Kingdom
80+ clients, recurring and new	**500+** employees

Company figures from the Motive Company Profile. Motive to verify before external use.

Why trust me with your programme

Records first. Opinions second.

Evidence

185+ days of EOT secured across 5 claims on three Riyadh fit-out and MEP projects, backed by contemporaneous records.

Early warning

Proactive monitoring and early notices reduced delay exposure by an estimated 15%.

Contract-aware

I assess variations, late approvals and procurement delays against the contract and advise on entitlement.

Clear reporting

Executive dashboards and KPIs give clients, consultants and management one view of the programme.

Source: my CV. The 15% figure is an estimate, as stated in the CV.

AI Planning Copilot

In development, not yet in use on client projects

I am building a Planning Engineer AI Copilot at Motive. It does the repetitive part of planning work. I keep the judgement and sign-off.

Weekly XER analysis

Compares each Primavera P6 update with the baseline. Flags slippage, float loss and new critical activities. Drafts the weekly report and refreshes the dashboard data.

BOQ cost and resource loading

Maps the priced BOQ to activities and loads cost and resources. Totals are reconciled to the BOQ so every update can earn value.

Tender technical submissions

Reads the RFP, builds the compliance matrix and drafts the methodology and programme sections from Motive's own library.

Rules it follows

- Code does the arithmetic. AI reads and writes.
- It never invents data. Missing information goes on a gap list.
- Every output keeps its source.
- A person reviews and signs before any notice, EOT claim or submission.

Start your project with Motive

Tell us your handover date. I will show you how the programme will be planned, tracked and reported.
